BRUSHES

W. P. FULLER & CO.

Adams Brushes

How FOREIGN EPICURES CO-OPERATE TO MAKE THEM GOOD

The Chinese and Russians do not consider a porker is ready to be killed until it is four or five years old, and incidentally has developed an excellent growth of bristles. The choicest of these bristles are painstakingly selected for use in manufacturing the justly famous ADAMS BRUSHES. Thus do our

foreign friends unwittingly co-operate to produce the essential part of the brush—the bristles.

It is but natural that the ADAMS BRUSHES should be our choice. Like W. P. FULLER & CO.'S Paints and Varnishes, they have the years of experience back of them—112 to be exact—which culminates in a product of marked excellence.

The demand for ADAMS BRUSHES has built the largest factory of its kind in the world. Obviously, the firm of Whiting-Adams, manufacturers of the ADAMS BRUSHES, import more bristles than any other concern engaged in making a similar product. Purchasing in such large quantities results in a marked benefit to the consumer, in the form of better brushes at lower prices.

Consumers rely upon trade-marks. A manufacturer is proud of his product when he gives it a trade-mark. It is his signature, his guarantee that the product has received his approval.

Dealers are anxious to sell products of merit, for it means satisfied customers. These are his biggest asset.

ADAMS BRUSHES have been satisfying the user for more than one hundred and twelve years.

The name ADAMS on a brush guarantees it. It means satisfaction in the quality of the brush. The price of ADAMS BRUSHES is right.

Paint Brush Depreciation How To Lessen It

*C*LEANING *B*RUSHES

After using the brush, wash it out with benzine, turpentine, or other thinners, and soak the brush in raw linseed oil. Lay it out on a flat surface or hang it in a vessel filled with raw oil. Do not let the brush touch the bottom or the bristles will turn. Old brushes can be easily cleaned by soaking them in a strong solution of Pearline water for forty-eight hours, and washing them out afterwards with water. This will not affect the bristles. If partly worn brushes are cleaned as above, they make the best kind of brushes for applying shellac, as alcohol softens the bristles in a new brush, and it soon becomes flabby. Creosote oil is a good cleaner for badly used brushes.

*V*ARNISH *B*RUSHES

Varnish brushes should be kept in varnish at all times. Care should be taken that the bristles should be entirely covered with varnish. See that the brush does not touch the bottom of the can. Varnish brushes, when not in use, can be kept in good shape by dipping them in wax that has been diluted with turpentine. In this way a varnish brush can be put away for months without hardening the bristles. Care should be taken to wash the brush thoroughly before using again. Use ADAMS RUBBER CEMENTED or glue set brushes for applying shellac and spirit varnishes.

*F*IRST *A*ID *S*UGGESTIONS

If the ends of a brush curl while painting blinds, or grill or fretwork, dip the ends in hot water. This will straighten the bristles. To straighten the hair in pencil brushes, pour a little raw oil on a piece of glass, hold a lighted candle under glass, draw pencil through the hot oil several times. The hair will straighten.

*C*AUTION

Do not put a new paint or varnish brush in water. The idea that a new brush must be soaked in water is a false one. Water soaking softens the bristles in a new brush, causes the leather on a stucco to swell and then shrink; wood to swell and sometimes split; rusts the metal ferrules and nails and often ruins a good brush.

After a brush has been used in paint or varnish, water will not affect it unless the bristles or hair are set in glue. A glue set brush must never be put in water.

CONCERNING THE ILLUSTRATIONS

THE COLORED ILLUSTRATIONS on the following pages are correct representations by photography on a reduced scale of the brushes shown; they indicate actual style and appearance, and will materially assist buyers in selecting lines with which they are not familiar.

The figures on the colored illustrations indicate the KEY NUMBERS of the brushes represented. The same key number accompanies the descriptive matter of each brush.

In ordering it is sufficient to specify the key number of the brush selected and size desired.

MEASUREMENTS

The measurements of all brushes listed are actual, except the widths of some of the cheaper grades which are nominal. In all cases, however, the lengths of stock given are the actual lengths, independent of the binding or ferrules.

We carry on hand at all times large stocks of all the brushes listed, and buying as we do, in very large quantities, places us in a position to give our customers the best possible service both as regards price and quality.

If at any time customers receive from us brushes that are not as represented, and do not turn out satisfactorily after ordinary conditions regarding the use of brushes have been observed, we want them to give us the opportunity of exchanging them. We do ask our customers, however, to read about how to use and take care of brushes on page K II.

Methods

Adaptability to requirements is what the artist or artisan expects from his brushes. The old Master was great because he "mixed his paints with brains." ADAMS brushes are mixed with the proper substance, and they are also tempered with a rare mechanical skill which is found only in the ADAMS factory. The combination of intelligent work-people and rapid, exact machines brings results not otherwise obtainable. Their factory has that rare combination, duplicated many times, which makes it possible to produce the great quantity demanded by brush users, with uniformity of quality and low cost of manufacture.

If satisfaction is worth anything to you, remember the name, W. P. FULLER & CO.

Reliability

"Nocomeapart" is not the name of an Indian Chief although it is "honest Injun." It is a condensed way of expressing the strong feature of ADAMS brushes. There isn't much occasion to argue a fact or feature that demonstrates itself. Making for over a century brushes which don't shed bristles and don't fail, renders it unnecessary to issue loud proclamations calling attention to such fact. Nearly every one who uses brushes, knows that ADAMS brushes always hold their bristles. To the very few who have not used them, we are in a still small voice stating brush features which will interest them, pointing the way to relief from one of their troubles. For that tired feeling which comes from bristles in the pot, or on the job instead of in the brush, use ADAMS brushes. They give instant and complete relief.

Our reputation is your protection. Buy W. P. FULLER & CO'S Paints by name!

American Superiority

Brush manufacturing in the United States has made as great strides toward perfection as any manufacturing industry. ADAMS brushes stand with other American goods that stand at the highest point of excellence in comparison with products of other countries. Not only is their quality at highest point, but cost to consumer is less than asked by European brush manufacturers.

Satisfaction is built into every one of the W. P. FULLER & CO. products.

Perfection in Bristle Brushes

In addition to the ordinary kinds of brushes which every brush user has, he should have a number of kinds for best work that are perfect in every respect. With them he will do the work of his best customers in a way to please them. The little difference in first cost is overcome by the wearing and working qualities, while the satisfaction of doing a job well crowns its completion even better than extra profits received from that kind of work. Satisfaction gained by using best tools makes work a pleasure. An industry carried on with best materials wins a position in the community far ahead of the ordinary, and perfect brushes are sure helps to success.

Many brushes are now on sale without the manufacturer's name upon them, and their quality is of such a questionable nature that the maker does not care to have his name associated with them. These brushes are usually made to fit a price rather than a practical want.

A brush that has the name “ADAMS” upon it is made on honor, and the makers are proud of it, and glad to have it go out to the world, not only as a practical tool, but as an advertisement of their ability as brush-makers; and they stand back of it in every way.

The difference in cost between a good brush and a poor one is slight, and the satisfaction and results that accompany the use of a good brush are worth many times the slight difference in first cost.

Your protection is in our reputation. W. P. FULLER & CO. make good paints.

 No. 8 “ $9\frac{1}{2}$ “ “ $4\frac{1}{8}$ “

Newly slacked lime will ruin bristles. Whitewash should stand twenty-four hours after it is cold before putting brushes into it.

Adams Dutch Kalsomine Brushes

which were an innovation a few years ago, have become a very popular line of brushes, and sales of them are made in large quantities. The liberal quantity of bristles in them enables users to spread a large amount of kalsomine more evenly at a stroke than is possible with other brushes.

Those who are using this style prefer them in every respect to others. They are especially desirable for work on concrete buildings, either outside or inside. They force the liquid into rough surfaces with the first stroke of the brush. On smooth surfaces they lay it evenly, never making streaked work. They are economical in price, and with them users accomplish best results more rapidly than with other styles.

The reputation of W. P. FULLER & CO. is your guaranty of complete satisfaction.

Kalsomine Brushes

Key 140

“Leader”

FACTS

Dealers should not overlook the fact that throughout the world CONSUMERS have learned to place the greatest reliance upon a name or trade-mark that has always stood for honesty and quality.

The dealer that sells the best goods holds his trade best, for way down at the end of the line there is always the consumer that must be satisfied. ADAMS brushes have been satisfying the consumer for more than one hundred years.

To keep your stock healthy see that "ADAMS," is on every brush you buy.

It is not the name that makes the brush good, but it is the brush that makes the name good.

The name ADAMS on a brush GUARANTEES its grade and quality, for in every grade of ADAMS Brushes the quality is kept distinct and uniform.

Good trade cannot be established on price alone. The consumer remembers QUALITY long after the price has been forgotten.

Since 1849 the name of W. P. FULLER & CO. has stood for quality.

K 84

Painters' Steel Wire Brushes

These brushes are designed for removing paint, varnish, etc., from wood, stone, brick, marble, metal and other surfaces, and can be advantageously used for general cleaning and scrubbing. They take the place of sandpaper and similar abrasives, and do quicker and better work.

Hand Scratch Brush

Made of fine, round, tempered steel wire. Size of block, $7\frac{1}{4} \times 2\frac{1}{4}$ inches. Packed 1 dozen in a carton.

No. 1611 6x19 rows, wire $1\frac{3}{4}$ inches long

This brush is designed for removing loose and scaly or blistered paint, etc., from wooden surfaces, walls, etc., and takes the place of No. 1 sandpaper.

Heavy Scratch Brush

Made of fine, round, tempered steel wire, extra heavily filled. Block with an extra thick top, firmly screwed on to prevent brush from coming apart under heavy usage. Size of block, $7\frac{5}{8} \times 2\frac{5}{8}$ inches. Packed 1 dozen in a carton.

No. 1623 5x13 rows, wire $1\frac{5}{8}$ inches long

This brush takes the place of No. 1 sandpaper, and will be found the most effective article on the market for cleaning blackened stone buildings or brick surfaces, and for scrubbing cement floors, etc.

Seventy-four successful years back of every W. P. FULLER & CO. product!

Painters' Steel Wire Brushes

Curved Back Scratch Brush

Made of very fine, round, tempered steel wire. Packed 1 dozen in a carton.

No. 1632 9x21 rows, wire $1\frac{1}{8}$ inches, Block 7x3 inches

No. 1637 7x22 rows, wire $1\frac{1}{8}$ inches, Block $8\frac{1}{4} \times 2\frac{3}{4}$ inches

These brushes are especially designed for removing paint, varnish, etc., from flat surfaces where a smooth finish is desired. They take the place of No. 0 sandpaper. The curved face of these brushes increases their efficiency, as it gives the user a greater leverage than ordinary straight or flat face brushes.

Shoe Handle Scratch Brush

Made of very fine, round, tempered steel wire. Length over all, $9\frac{3}{4}$ inches. Brush part 5 inches long. Packed 1 dozen in a carton.

No. 1641 4x16 rows, wire $1\frac{1}{8}$ inches long

This brush is designed for the same purpose as the No. 1637 brush, the narrow face adapting it to surfaces not accessible to the wider brushes. It is an excellent brush for removing varnish, either with or without the aid of varnish removing preparations.

Satisfaction is built into every one of the W. P. FULLER & CO. products.

Painters' Steel Wire Brushes

Extra Narrow Scratch Brush

Made of fine, round, tempered steel wire in same style as No. 1641 Shoe Handle Scratch Brush, but narrower. Length over all, 10 inches. Brush part $4\frac{5}{8}$ inches long.

No. 1646 2x15 rows, wires $1\frac{1}{4}$ inches long

For removing paint from very narrow crevices, such as the spokes of a wheel close to the hub. It is also suitable for cleaning the chain and other parts connected with the bearings and gears of automobiles, motorcycles, etc.

Long Handle Scratch Brush

Made of fine, round, tempered steel wires. Panel back.

Length over all, $14\frac{1}{2}$ inches. Brush part, 6 inches long. Width of block, 1 inch. Packed 1 dozen in a carton.

No. 1651 3x19 rows, wire $1\frac{1}{8}$ inches long

This brush is designed for fine scouring and scrubbing purposes. Very effective for getting at crevices, grooves, corners and other out-of-the-way places, such as under eaves of buildings, etc.

Scratch Brush and Scraper

Made of fine, round, tempered steel wire. Length over all 11 inches.

No. 79 4x10 rows, wire $1\frac{1}{2}$ inches long

Equipped with 3-inch tempered steel scraper.

This brush is designed for heavy work such as cleaning bridges, ship sides, heavy castings, etc.

Your protection is in our reputation. W. P. FULLER & CO. make good paints.

Painters' Steel Wire Brushes

Round Wire Dusters

Made of fine, round, tempered steel wire. Size of block, $2\frac{3}{8} \times 1\frac{1}{8}$ inches. Packed 1 dozen in a carton.

No. 1661 6x10 rows, wire $2\frac{1}{4}$ inches long

Particularly adapted for removing loose and scaly paint from the bottom of fences, baseboards, etc.

Coarse Flat Wire Scratch Brushes

Solid back. Made of flat, tempered steel wire. Size of block, $7\frac{3}{4} \times 2\frac{5}{8}$ inches.

No. 1737 5x10 rows, wire 4 inches long

No. 1737 is designed for cleaning castings, and for removing paint, rust, etc., from bridges and other iron and steel work.

No. 1801 5x10 rows, wire $1\frac{1}{4}$ inches long

No. 1801 with its short, stiff wires is especially adapted for scouring and scrubbing stone, removing loose paint, scales, rust, etc., from buildings, fences, ornamental wire work, and for scraping butcher blocks.

You will remember the quality of W. P. FULLER & CO. paints for many years.

Painters' Steel Wire Brushes

“Wisco” Assortment

An assortment of staple and profitable sellers for use in shops, stores, homes, and for many industrial purposes.

Put up in a display box containing the following brushes:

One-third dozen	No. 1651
One-sixth	“ No. 1661
One-sixth	“ No. 1632
One-sixth	“ No. 1611
One-sixth	“ No. 1641
One-sixth	“ No. 1801
One-third	“ No. 1646
